DATA SHEET

OmniPriv's Privileged Access Manager

The Challenge

Identity and Access Security represents one of the most critical security challenges organizations face today. Privileged accounts are the keys to the kingdom—when properly managed, they enable system administration, facilitate automation, safeguard sensitive information, and ensure business continuity. However, in the wrong hands, these accounts become devastating attack vectors.

Privileged accounts are targeted in the majority of sophisticated cyber attacks. With elevated access, attackers can disable security controls, compromise entire IT infrastructures, exfiltrate sensitive data, and cause irreparable damage to business operations.

Organizations struggle with multiple challenges when securing privileged access:

Credential Management Complexity - Unsecured credential storage, manual, password changes, and difficulty tracking which users have access to critical systems create significant security gaps and operational burden.

Lack of Centralized Visibility - Distributed privileged sessions across on-premises, cloud, and hybrid environments make it nearly impossible to monitor and control access centrally, increasing compliance risks.

Insufficient Threat Detection- Without comprehensive analytics on privileged activity, organizations cannot identify suspicious behavior patterns, lateral movement, or insider threats in real-time.

Remote Access Security Gaps - Third-party vendors and remote employees accessing critical systems often bypass proper authentication controls, creating security blind spots.

Access Control Deficiencies - Difficulty enforcing granular access policies to critical infrastructure, cloud platforms, and SaaS applications leads to excessive privilege exposure.

Compliance and Audit Challenges - Inability to produce comprehensive audit trails and demonstrate compliance with regulatory frameworks.

The Solution

OmniPriv Privileged Access Manager is a comprehensive identity security platform designed to eliminate privileged access risks across hybrid cloud environments. OmniPriv provides intelligent, automated controls to protect, monitor, and control privileged access while maintaining operational efficiency. The platform delivers:

SPECIFICATIONS

Resource & Access Management
- User Management
- Role Management
- Group Management
- Asset Management
- Zone Management
- Tag Management
- Authorization Management
- Organizational Management

Authentication Methods
- Local Authentication
- LDAP
- RADIUS

Supported Asset Types
- Unix, Linux
- Windows
- Network Devices
- MySQL, MariaDB, PostgreSQL, Redis, MongoDB
- Oracle
- SQL Server
- Websites
- Kubernetes (Basic)

Connection Methods
- Web-based SSH, RDP, SDTP, Database Access
- Desktop SFTP/RDP/Database Client

Security & Control
- User Login Control
- Asset Access Control
- Command Auditing
- Session Permission Control

Intelligent Credential Management - Automated discovery, rotation, and lifecycle management of privileged credentials (passwords and SSH keys) across all environments with zero-trust verification.

Distributed Unified Access Control- Centralized policy-based access controls with context-aware conditional access logic that adapts to real-time risk signals.

Advanced Session Isolation and Monitoring - Secure, isolated sessions with complete activity recording, keystroke logging, command monitoring, and replay capabilities.

Remote Access Security Gaps - Machine learning-powered anomaly detection identifies suspicious activity, policy violations, and potential insider threats.

Secure Remote Access - Passwordless, VPN-less access for remote workers and vendors with multi-factor authentication and automated session monitoring.

Efficiently protect, monitor and control privileged access across on-premises, cloud and hybrid infrastructure.

Key Features

Multi-Factor Authentication (MFA) - Adaptive MFA with biometric, hardware token, and software-based options.

Single Sign-On (SSO) - Frictionless access with modern SSO protocols

Just-In-Time Access - Temporary elevated privileges with automatic revocation.

Privileged Session Recording - Complete session capture with searchable audit trails.

Threat Intelligence Integration - Real-time feeds from threat sources and SIEM systems.

API-First Architecture - Extensible platform with comprehensive REST APIs for integration.

Multi-Cloud Support - Native support for AWS, Azure, GCP, and hybrid environments.

Benefits

Reduce Cyber Risk - Minimize the attack surface by securing privileged credentials and enforcing least-privilege access policies. Detect and respond to threats in real-time before damage occurs.

Improve Operational Efficiency - Eliminate manual, error-prone administrative processes. Automate credential rotation, access provisioning, and compliance reporting. Free IT teams to focus on strategic initiatives.

Accelerate Digital Transformation - Balance security with user experience. Enable secure access to critical assets while maintaining centralized visibility and control across your entire infrastructure.

Reduce Incident Response Time - Identify suspicious activity within seconds. Automatically contain threats through session isolation and credential lockdown. Reduce investigation time with complete audit trails.

OmniPriv is designed for enterprise organizations requiring comprehensive privileged access management across complex, distributed infrastructure. The platform combines security, compliance, and operational efficiency in a single integrated solution.

SPECIFICATIONS

Audit & Monitoring
- Session Recording
- File Transfer Auditing
- User Login Logs
- User Operation Logs
- Online Session Monitoring

System Features
- Email Notifications
- Basic System Logs
- Open-Source Deployment
- Docker-based Installation
- REST APIs

System Requirements
Minimum Deployment
- CPU: 8+ cores (2.4 GHz or higher)
- RAM: 32 GB minimum
- Storage: 500 GB SSD (depends on retention policy)
- Network: 1 Gbps connectivity

Recommended Production Deployment
- CPU: 16+ cores
- RAM: 64-128 GB
- Storage: 2 TB+ NVMe SSD
- Network: 10 Gbps for distributed deployments

Interface Features
- Responsive web-based portal (Chrome, Firefox, Safari, Edge)
- Role-based dashboards and customizable widgets
- Advanced search and filtering capabilities
- Multi-workspace support for enterprise deployments
